

Three Mile Island Alert Congratulates the Susquehanna River Basin Commission

January 20, 2021

TMI-Alert joins the Susquehanna River Basin Commission in celebrating the Compact's 50th Anniversary on January 23, 2021. TMIA applauds the Commission for developing and administering the Susquehanna River Basin's resources to manage the water that flows through Pennsylvania's nuclear generating stations located in Berwick, Middletown, and Delta, Pennsylvania.

"Three Mile Island Alert congratulates the Susquehanna River Basin Commission for five decades of stewardship of the Susquehanna River at the Peach Bottom Atomic Power Station, the Susquehanna Steam Electric Station, and the Three Mile Island Nuclear Generating Station," said Eric Epstein, Chairman, of Three Mile Island Alert, Inc. "The Susquehanna River Basin Commission is a balanced and fair regulator for managing consumptive use and surface water withdrawals for nuclear generating stations dating back to 1974."

"We look forward to work in helping the commission conserve, manage, and monitor the Susquehanna River's resources at nuclear generating stations that require millions of gallons of river water every day for decontamination and energy production."
